PROFIL

QA Automation Engineer ISTQB Certified

SUMMARY OF SKILLS

- Experience in preparing automated test scripts for acceptance and regression tests
- Experience in test automation framework concepts and technologies
- Hands on experience in preparing Test Plan, Test Cases and Test Scenarios
- Knowledge of modern protocols and APIs (REST etc.)
- Executed automated tests via CI (continuous integration) pipelines with Gitlab-CI/CD
- Good knowledge of all stages of software developmental life cycle (SDLC), secure software developmental life cycle (SSDLC) and software testing life cycle (STLC), DevOps and Agile methodologies.
- Knowledge of virtualization systems and solutions
- Knowledge of Cloud service market, models, offering types, and architecture concepts
- Knowledge of security risks, attacks and assessments
- Confident and comfortable with both independent and team work
- Always keen to learn new technologies and look for advancement
- Curiosity, ability to meet challenges

EDUCATION

2017– 2019

MASTER'S DEGREE OF COMPUTER SCIENCE ENGINEERING

- National Engineers School of Tunis (ENIT)
- **SPECIALTY** : Services ,Security and Networks

2012– 2016

BACHELOR'S DEGREE OF COMPUTER SCIENCE ENGINEERING

- Higher School of Engineering and Technologies (ESPRIT)
- **SPECIALTY** : Systems, Networks and Cloud Computing

2008– 2011

PREPARATORY CLASS

- Preparatory Institute for Engineering Studies « IPEIN »
- **SPECIALTY**: MATH/PHY

TECHNICAL SKILLS

- Languages : VB script, HTML5/CSS3, Python, JavaScript, Shell Bash, Groovy
- Testing Tools: SOAPUI, Restclient, UFT, QC/ALM, Robot Framework IDE (Ride)
- Operation Systems : windows 7/8/10, windows server 2008/2012 r2, Ubuntu, Centos
- Cloud Computing and Virtualization : Hyper-V, ESXI, vSphere vCenter, KVM, Openstack, Azure Platform(Database SQL Server, Active Directory), Cloudify, VirtualBox, VMware workstation, Docker
- Networking : ipv4/ipv6 address, VLAN, MPLS, VPN
- Collaborative Tools : JIRA, Gitlab, Zeplin, Test Link
- Continuous Integration Tools : Gitlab CI/CD
- Database /Database Tools: MySQL, SQLite, SQL server , Oracle
- Methodologies : SCRUM, SAFE

WORK EXPERIENCE

May 2017 - Present: QA Automation Engineer at SOFRECOM Tunisia (Subsidiary of Orange Group)

Automation Tester

Project: Orange Portal

- Develop automated test scripts for new features based on acceptance criteria and user stories during each development Sprint
- Create and maintain test cases to perform regression testing of software upgrades for our products
- Run and troubleshoot the automated regression test scripts on multiple environments
- Report and tracking of bugs
- Develop scripts for the execution of automated tests on Gitlab-CI
- Collaborate with developers, testers and/or end users to determine appropriate solutions and ensure test planning adheres to the proper requirements
- Provide input into improving the automation test framework for the organization
- Follow the methodology Scrum: Estimation of tasks, definition of every iteration contents, Retrospective.

Tools: Robot Framework, Grid Selenium, Python, Gitlab, Gitlab-CI, Jira, Zeplin

Project: MAGIC

- Involved in Functional Testing, GUI Testing and web Services Testing
- Developed Automated Test Scripts for Functional Testing using QTP
- Generated detailed bug reports, pass/fail reports using ALM
- Used ALM for bug tracking and reporting and followed up with the development team to validate bug fixes and update status
- Involved in Regression Testing using QuickTest

- Develop automated REST API tests using SOAPUI
- Performed reviews for continuous improvement in meeting client goals and needs

Tools: UFT, QC/ALM, VB Script, REST SOAPUI, Groovy, Test Link, Gitlab

May 2018 –Present: Master Researcher at SOFRECOM Tunisia

Master Researcher

Project: Security By design Approach (DevSecOps)

Present an approach to software and hardware development that seeks to make systems as free of vulnerabilities and impervious to attack as possible through such measures as continuous testing, authentication safeguards and adherence to best programming practices by integrating security in each SDLC step. This development methodology contains:

- Identification and analysis of security requirements, threats and risks
- Assessing and measuring vulnerabilities and prioritizing threats
- Analysis and structuring of the security design: Mapping of priority threats and attacks for a security mechanism, identify environmental constraints and design attributes
- Security test: Scan, vulnerabilities Assessment, audit and security review

Feb 2016 –Sep 2016: Internship trainee at EXIS-IT

Internship trainee

Project: Implementation of a private cloud platform (PaaS)

- Investigation of the global architectures, networks and storage of each component (ESXI, VCenter, Mirantis, Cloudify)
- Installation and configuration of network and storage parts of VMware ESXI system on a dedicated OVH server.
- Installation and configuration of VMware VCenter and integrate it with ESXI
- Installation and configuration of Mirantis (Openstack distribution)
- Configuration of KVM hypervisor to ensure high availability and load balancing
- Deployment of Openstack environment
- Installation, configuration and integration of Cloudify with all the components of the Cloud solution
- Supervising and monitoring the status of the cloud via OSSIM

Tools: VMware ESXI, VMware VCenter, Mirantis, Openstack, Cloudify, KVM, OSSIM, Pfsense, Centos, Ubuntu, VMware Workstation, VirtualBox
